Residential Tax Credit Information

INCREASE IN TAX CREDITS!

For qualified improvements (see below), homeowners may be able to claim tax credits equal to 30% of the installed cost (up to \$1500)

Qualifying Equipment for Tax Credits

Credits Limited to 30% of Installed Costs (up to \$1500) in the tax years 2009 and 2010

Equipment Type	Minimum Energy Efficiency Standard to Qualify		
Central Air Conditioners	Split System 16 SEER 13 EER		Package System 14 SEER 12 EER
Electric Air Source Heat Pumps	Split HP 15 SEER 12.5 EER 8.5 HSPF		Package System 14 SEER 12 EER 8 HSPF
Geothermal Heat Pump	Closed Loop 14.1 EER 3.3 COP	Open Loop 16.2 EER 3.6 COP	Direct Expansion 15 EER 3.5 COP
Natural Gas Furnace	95% AFUE		

Longer Term

The new tax credits are retroactive to January 1, 2009, and expire on December 31, 2010. The \$1500 limit is for all improvements made during the two year term, not \$1500 each year.

Per-Appliance Caps Removed

Homeowners may use the entire \$1500 tax credit limit on a single qualifying improvement. The previous per-appliance caps that limited the homeowner to just \$150 for a high efficiency Furnace or \$300 for a high efficiency central air conditioner or heat pump have been removed.

Expanded Geothermal Tax Credits

Homeowners who install geothermal heat pump systems may be able to claim up to 30% of the installed costs in tax credits in the year the system is placed into service. The \$2000 tax credit limit has been removed. The geothermal tax credit has a longer term, from January 1, 2009 and expires December 31, 2016.

HVAC Contractors should be aware that the \$1500 limit applies to many types of energy efficient home improvements, including windows, doors, roofing shingles and insulation. All of these contractors will be competing for the work related to these tax credits.

Frequently Asked Questions about the Tax Credits

Q: Can the homeowner claim \$1500 in tax credits for improvements made in 2009 and again for improvements made in 2010?

A: No. Taxpayers may only be eligible for a total of \$1500 in tax credits for improvements in the combined two year period 2009 and 2010.

Q: Can a homeowner use the entire \$1500 limit as a credit toward the installation of one appliance?

A: Yes. A homeowner may use the entire \$1500 in tax credits for installing a single appliance, such as a qualified air conditioner or heat pump. If a homeowner replaced several appliances at the primary residence (ie: two air conditioning systems) the maximum credit will be \$1500.

Q: What happens if the 30% or the installed cost is less than \$1500?

A: The homeowner can “bank” the remaining available tax credit for other qualified improvements. Any single installation that costs more than \$5000 will instantly reach the \$1500 limit.

Q: Does the Tax Credit apply to the cost of the equipment or equipment plus labor?

A: The tax credit applies to the installed costs of the qualified equipment, which includes labor.

Q: How will a taxpayer claim the credit and receive their money?

A: In the past, the IRS has directed taxpayers to use form 5695 Version 2009 (expected to be available toward the end of 2009), Residential Energy Efficient Property Credit. Taxpayers are not required to file anything more than the form, but are instructed to keep records of their installation.

Q: What is the difference between a tax credit and a tax deduction?

A: As a tax credit applies against the taxpayers liability, a tax deduction applies against a taxpayer's income, lowering the adjusted gross income and possibly moving the taxpayer to a lower bracket. Tax credits have a great benefit to a taxpayer. With a tax credit, if the taxpayer owes \$2000 in taxes, their liability is reduced to \$500. If the owe nothing, they can expect a \$1500 refund.

Q: What if the homeowner already claimed \$500 in tax credits in 2006 or 2007?

A: The “lifetime caps” that used to be in place have been removed. Any previous claims do not count against the current \$1500 tax credit limit.

Q: Can a homeowner claim the credit for improvements to a second home?

A: No. The tax credit is only available for improvements to the taxpayer's primary residence.

Q: Can a small business that operates out of a townhouse and installs residential equipment in a commercial setting claim the credit?

A: No. The tax credit may only be claimed by taxpayer's on their personal income taxes for improvements to their primary residence.

Q: What other types of energy efficiency improvements qualify for the tax credits?

A: Homeowners may be able to qualify for the tax credits if they make qualified improvements to: windows and doors including skylights, storm windows and storm doors, roofing including metal and asphalt roofs; and insulation. All of these improvements qualify, but homeowners may only claim \$1500 in total for any improvements.

Q: Should I promise the homeowner that they will definitely qualify for the tax credit?

A: NO. Each taxpayer's situation is different. You may not know if the taxpayer has already made other improvements that qualify, or if their tax situation will change by the end of the year. But to be safe, you can always say "by installing qualified equipment, the taxpayer may be qualified to claim up to 30% of the installed costs (up to the \$1500 limit) in tax credits."
